Articles

- [Designing Toast Messages for Accessibility](#)
- [Toasts or snack bars? — designing organic notifications](#)
- Tangentially related: [How to design a notification center for your app](#)
 - Although instead of a notification center, with offline-first, we could have like a "activity center", where a user can see everything they've ever done and revert anything.

Checklists

Here are the types of toasts we currently need:

Desktop

- Error (with potentially long error message)
- Info
- Success
- Undo (looks like an Info toast, but with an undo button)

Mobile

- Error (with potentially long error message)
- Info
- Success
- Undo (looks like an Info toast, but with an undo button)

Brainstorming

- I quite like the Tailwind UI toasts (the first piece of inspiration).

Designs

Grayscale

Success Title!

Some other more detailed message that can span multiple lines.

Warning Title

Some other more detailed message that can span multiple lines.

Error Title

Some other more detailed message that can span multiple lines.
