

How to change the 'From' address for transactional emails

Currently, the 'from' address used for transactional email in uFincs (for example, password reset emails) is `app@mail.ufincs.com`.

If we were to change this address, here are the things that would need to be changed:

- In the Backend service, in the `default.json` config, change the `mailer.from` address.
- If the subdomain is changing away from `mail.ufincs.com`, then:
 - Go to Mailgun and add the new subdomain.
 - Go to Google Workspace and add the new subdomain. Then add the address as an 'alternative email' for the user who will receive the emails (i.e. me).
