

Idea: UI Redesign

The following document will describe a potential major overhaul of UI/UX of uFincs.

Design Brainstorming

The following is a brainstorming of ideas for what the new design of uFincs could be like.

- Could take Steve Schoger's idea of putting icons inside circles and apply that to the Transaction/Account icons -- that is, put the Income green up arrow inside a circle and display it like that.

Inspirational Resources

A set of resources to look for inspiration.

- An article describing how to build a personal finance app: [How to Build an Effective Personal Finance Application |...](#)
 - lol wut
- Liro, an app designed for UofT students: [Liro: Financial empowerment for students](#)
 - [redacted]
 - I like the overall layouts.
 - The tabs for switching between monthly/weekly are quite nice.
 - The charts are for the budget (with the dollar value in the center and the progress as a circle around it) are also nice, but not really directly applicable.
 - The 'Account Balances' table on the home page is also really nice and simple.
 - Overall color palette is also nice and clean -- simple blue everywhere with greys, and other colors accented in the charts.
- 'Budget Expenses' mockup: [Budget Expenses](#)
 - [redacted]
 - I like the Expenses breakdown as an alternative for just a plain pie chart of expenses (obviously, for us, the percentages would be for the month as opposed to against a budget).
 - It shows more data and looks cleaner.

- Everything Tailwind CSS/UI: [Tailwind UI](#) and [Tailwind CSS - A utility-first CSS framework for rapidly building custom designs](#)
 - Designed by the guys behind Refactoring UI, the UI designs they put out are really something else in terms look and feel.
 - For example, here is their 'Application' example: [Tailwind UI Example - Detail View](#)
 - [redacted]
