

## Story UFC-261: Encryption Ack

The following document will go over the design of adding a checkbox to sign-up for acknowledging encryption, as outlined in Story ticket UFC-261.

### Acceptance Criteria

For reference, the following are the acceptance criteria for this ticket:

- I have to check a checkbox during Sign Up so that I acknowledge that forgetting my password means losing my data.

### Design Brainstorming

In terms of adding the checkbox and how to validate, I have to wonder if we should validate such that the Sign Up button is disabled until the form is valid (i.e. both inputs are filled, the checkbox is checked), or just have the button always enabled but show an error for anything that isn't filled out. That is kinda how we've been currently doing it, but if we do that, then we need to figure out what the error state of the checkbox is.

Maybe the checkbox error state could just be a red ring around the checkbox? But we're not using custom checkboxes, so we can't really do that *nice*ly...

I guess we can just mark it required and leave it at that?

### Component Breakdown

#### Atoms

- N/A

#### Molecules

- [modification] AuthForm (add the consent checkbox for Sign Up)

#### Organisms

- N/A

#### Scenes

- N/A

### Tasks

- Add the checkbox to the Sign Up form and validate client-side only.
