

Story UFC-281: Email Changing

The following document will go over the design of email address changing, as outlined in Story ticket UFC-281.

Acceptance Criteria

For reference, the following are the acceptance criteria for this ticket:

- In the user settings, I want to be able to change the email address of my user account.
- I want an email sent to my old email and my new email that the email address of my account was changed.

Design Brainstorming

I quite like Atlassian's email change interface:

Email

Change email

Your current email address is **dsrobo620@gmail.com**

Connected account

Your account is connected to a Google account. Changing the email address here will disconnect your account from the Google account.

New email address

Save changes

Email notifications

To manage what emails you get, visit the [email preferences center](#).

Basically, what I'm thinking is, add headers for Change email and Change password, to separate out each section.

Then, chuck the above design (text message indicating current address, input for new address, save button) above the current section for changing passwords.

That should work.

Component Breakdown

Atoms

- N/A

Molecules

- N/A

Organisms

- [modification] SettingsAccountForm (split out the password change form into a dedicate form; create a form for changing email)
 - I don't even think we should bother splitting each form out as a separate molecule; they shouldn't be re-used anywhere else and they should be small enough that it should be fine to keep them together as 'Other Components' in the SettingsAccountForm.
 - update: ended up splitting them into separate components...

Scenes

- N/A

Tasks

- Build the layout.
- Make it functional.
