

Story UFC-197: Transactions Search

The following document will go over the design of transactions searching by description, as outlined in Story ticket UFC-197.

Acceptance Criteria

For reference, the following are the acceptance criteria for this ticket:

- I want an input on the Transactions page that I can use to search transactions by description.
- The searched transactions should still have all of the other filters (date, type, etc) applied.
- When there is no search query, all transactions should be used (with all other filters applied).

Design Brainstorming

Something that'll need to be done in this ticket is add an option when searching the transactions to not perform that 'de-duplicate for the latest transaction' thing, since we want *all* transactions when performing searches (unlike when performing description autocompletions).

Also, I'm changing the placement of the search input slightly -- at least, on mobile. See, since we changed the design of the Transactions page so that the date range filter is inline with the header (to match all of the other pages), we can't exactly put the search input inline with the date range filter. As such, it'll have its as-designed position on a separate line -- above the type filters and below the date range filter -- but on mobile, it won't be a collapsed input that is inline with the header; instead it'll just hold its position as the only element on its line.

Slightly less space efficient from a mobile perspective, but much simpler to implement.

Component Breakdown

Atoms

N/A

Molecules

- TransactionsSearchInput

Organisms

N/A

Scenes

- [modification] Transactions (add TransactionsSearchInput and context provider)

Tasks

- Add the input to the Transactions scene and make it functional.
