User Dropdown

Inspiration

[redacted]

Checklists

The following is what we need for the user dropdown:

- An icon/button to click to bring up the dropdown.

- An item to access the settings.

- An item to log out.

Brainstorming

- It's just a dropdown. No need to complicate it. As much as having something fancy like the above inspiration, we don't need it.

- The icon/button should just be whatever icon our icon library provides for 'user' or 'account' or 'profile'. Put on a light background.
