Ideas for Microinteractions

- Dropdowns can 'unfurl' downwards, instead of just fading in.

- Hovering on buttons can add/increase drop shadow while lightening background color.

- Also, shift buttons up 1px and lighten text color, ala Stripe (see the Refactoring UI Twitter thread).

- Clicking on buttons can remove/decrease drop shadow while darkening background color, to simulate it getting pushed in.

- Transaction list items can slide to the left unveil the actions.

- Deleted transaction list items can slide out completely to the right and then transition their height to 0. This way, it looks like the transaction has been thrown out.

- Custom focus state for inputs and buttons. Probably just a custom outline.

  - Focus state for ghost/outline buttons could be a filled button.

- Sliding the underline on tabs between tabs (e.g. on the One-Off and Recurring tabs).

- Optional Details can unfurl downwards.

- Search icon expanding into input.

  - Some examples: 20 Creative Search Bar Design Inspirations with HTML/CSS/ Bootstrap

- Having list items animate in and out of a list.

- Having the bars on the Income/Expense summaries animate.

- A little shake on the submit button when there is an error.

- Loading state for submit button examples:
